

# Uptown-Process

Uptown-Process is the place where you learn more about lean and fast processes. There are various kinds of process frameworks available. Our personal favorite is PMI Disciplined Agile providing you with a goal-centric approach and a choice of different delivery lifecycles. We can distinguish between an iteration-based lifecycle like Scrum and a flow-based lifecycle like Kanban. In addition, there are two development approaches: the one-stop-shop for agile BI delivery, in which full increments are delivered within one single iteration. As this boutique approach doesn't work in all situations, there is the Assembly Line Factory approach, where increments of your upcoming BI solution will flow through an assembly line with different workstations taking several (short) iterations to complete.

## One-Stop-Shop Approach

## Assembly Line Approach
